DOUBLE-DEEP RACKING

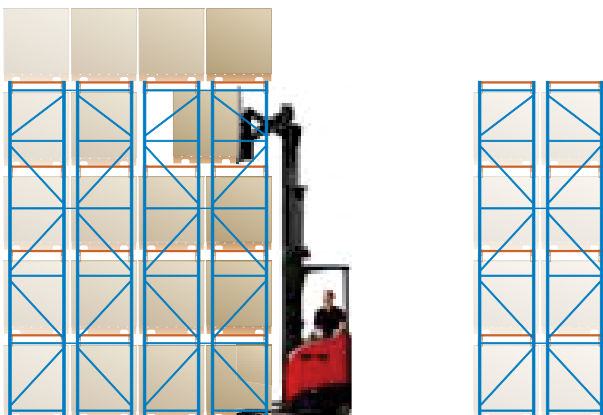

*One Stop Storage Solution
In Industrial Racking System*

A derivative to the Selective Pallet racking, the double Deep System requires the use of a specialist reach truck or an attachment fitted to reach truck. Whilst achieving increases in capacity of up to 30% above the former, only 50% of the pallets are immediately accessible.

This system however provides an excellent method of increasing warehouse capacity or when alternative systems such as the drive-in which require high numbers of homogenous pallet types, are not possible

Feature:

- ◆ Double-deep rack derived from selective pallet rack
- ◆ Simple structure, high storage capacity, meet with different storage requirements which beam racks can not do
- ◆ Double storage capacity than common beam racks
- ◆ Applicable to storage of food and beverage packing

Think outside the box
