LIVE PALLET STORAGE RACKING

*One Stop Storage Solution
In Industrial Racking System*

Optimizing Warehouse Space and Efficiency

Live storage pallet racking, also known as gravity flow racking, is a high-density storage system that utilizes gravity to move pallets efficiently. It features a series of slightly inclined roller tracks on each level, allowing pallets to slide freely from the loading area to the unloading zone.

FEATURES

1. Roller Beds

Slightly inclined roller beds for smooth pallet movement.

2. Speed Control

Lane guards and speed control features for safety.

3. Customizable Design

Can be designed for various pallet sizes and weights.

4. High Wight Capacity

Designed to hold Multiple Pallets With Heavy Loads.

Benefits and Advantages

1.Space Optimization

Live storage maximizes storage capacity by utilizing fewer aisles compared to traditional pallet racking.

2.Improved Stock Rotation

The First-In-First-Out (FIFO) method ensures older products are retrieved first, minimizing product expiration and obsolescence.

3.Increased Efficiency

Faster loading and unloading due to gravity-fed movement and reduced forklift travel within the racking system.

4.Reduced Labor Costs

Streamlined product movement translates to lower labour requirements for managing inventory.

Types of Live Storage Racking

- **Gravity Fed (FIFO):** The most common type, with pallets loaded on one side and exiting on the opposite end, ensuring proper stock rotation.
- **Push Back (LIFO):** Utilizes a single loading/unloading point. Pallets are pushed back as new pallets are added, ideal for situations where maximizing storage depth is a priority over strict FIFO order

Think outside the box

Drive-in Drive Thru Pallet Racking

Modular Mezzanine Floor

Narrow Aisle Pallet Racking

LONG SPAN SHELVING RACK

Boltless Long Span Shelving Rack

Multi Tier Long Span Shelving Rack

Cantilever Racking

M.S Powder Coated Cupboard

Rivet Shelving Rack

Mobile Shelving Rack, Compactor

M.S Powder Coated Lockers

Electric Forklift
